

hey everybody and welcome we are now live on youtube yet again we've got another live broadcast and we are so excited I can't tell you we're exhausted we're exhausted but we are super excited about what's coming up and so we hope you guys will join us tonight have a good time talking about air guns because we're going to get into some things I think going to be pretty stinking awesome Travis how you doing man you know Rick I'm doing super good yeah we're uh we're throwing in a lot of hours here and getting things uh ready to rock and roll for the air gun expo as we all know is coming up middle of next month so not much uh not the weight's not much longer now yeah I mean I guess that's like the big news right so you just I mean I was going to build up to it right oh and usually it's like yeah just like that like spoiler alert throw it all up there huh uh well okay so if you guys have been following our videos and what we've been doing we've been talking a lot about the airgun expo and all right so old story old stuff no shot show well that's a bmer because I used to like to go shot show and meet all my friends and get all everything lined up for the whole year and like a week it was wonderfully efficient expensive and not just for me going but for the people that were exhibiting is very very expensive you know Rick I think every single time I've ever been a shot show I've caught the flu yeah well I I am glad I didn't get that this time this this time wouldn't have been so good anyway yes I've had the experience too but Travis called me up said you know there's no shot show okay I figured they're gonna cancel it and we came up with what no shot showed no problem and we immediately started looking at what can we do hey there tom we started immediately looking at what we can do to provide an alternative not only to companies that want to get the product out but also you guys who actually liked watching our shot show footage but what happened and you talked about this Travis I'll let you jump in here a minute uh hey there Mike's backyard hey yeah from

uh Canada I love that uh anyway you talked a lot about this when we were just kicking it around Travis that if you go to range day at shot show there's like two air guns yeah it's a ghost town nothing from an air guns perspective's perspective look I like going to rage day because I got to shoot salado I got to shoot yeah they got lots of they've got lots of powder burners huh yeah yeah so that stuff's awesome love doing that but from an air gunner's perspective there really was a lot wrecks would show up and occasionally there'd be another party but what we wanted to do is really make the airgun expo focus on what you don't get to see and that is us working with the guns shooting the guns and not just being Travis we got some other people oh yeah we got some we got some we got some heavy hitters coming don't we I'm just I'm super excited so I want to give you guys an update Travis can chime in too on what we've got so far uh so I sent out an email and we're a little late I mean frankly we need probably six months to plan something like this and we gave ourselves about five weeks really uh which is not a lot of time but already things are filling

up so it just shows that uh this is probably something that I'm hoping you want to do it more than just this one time right Travis yeah I think this is at least an annual show you know once a year at least probably better suited for the industry being biannual for the you know the spring and fall yeah because that's when the two types of uh air rifles come out you know the sporting stuff and then the hunting stuff so it's a I think biannual probably be better but it's a lot of work so I don't know if we could do it I don't know if we could do a biannual man I think I think once if this goes well uh and everything's being hosted here at Airgunweb studios down at my range so we've got we just had our internet upgraded which was thank you dell telephone by the way we're getting our range reworked uh I think we're going to be in good shape infrastructure wise and I'm going to get rid of that phone call who's calling me I don't know who that is [Music] and there we go I don't know how to turn that phone off and they're calling again uh I get off the hook man like the old days yeah I might have to do that and okay I am unplug it that's what I'll do anyway yeah so we're all set up he's got his internet upgraded we've got uh all the video equipment ready to go we've got all the audio equipment ready to go you got some big wigs coming in to uh shake it up a little bit yeah yeah you know we got we've got a lot of product to show off though right so here here's what happened I sent out this email and like immediately like the next day in my inbox was arrogance of Arizona saying yes we're in whatever it is we want to do it yeah and smart it was that was like awesome so not only they're not just come on to get a little bit they came on as a co-sponsor to the entire event and that is huge that's a big deal so Larry is coming with the van and so if there's been these guns that you guys have been wanting to see this the full auto semi auto all of that red wolf goodness all those beautiful day states that is what they're bringing out so that's like super cool and then uh Umarex is signed up Gamo was signed up we've got JSB pellets is going to be there uh ransom rest which is a company Angie just did some stuff with them they're gonna have some product there we're gonna get to play with who else hawk well I gotta twist Kevin's arm but I'm pretty sure hawk's gonna be there I've got some other folks I was talking to today as well as some other folks I'm talking to as well I don't want to say anything because I really want them to come and I don't want to you know uh I don't want to tell you guys are going to be here and you know for one reason it doesn't work out but we've got in the cast of characters demo is growing yeah I mean well Joe from JSB is going to be here Joe will be here all week that I think in and of itself is going to be 18 optics that was another 18 optics yeah and it goes on and on we got a lot of people so it is actually coming out to be a pretty cool deal so I'm super pumped and we got more and we've got more too Rick I didn't mean to overtalk you there but you know that's fine and you're working on your angles these are just the guys I've been able to finagle and you working on your group of folks so yeah we're getting making it happen yeah uh where is it happening tom's asking this is gonna be a virtual show so if you guys get a chance I'll just put in the chat here it's the

airgunexpo.com if you go to the website uh there it is if you go to the website you'll be able to uh just see everything we're doing live we're gonna start in the morning and end at night obviously we gotta eat and do other things that are necessity but you know we're looking at having multiple live we'll call it reviews of air guns sure right there you guys can join right you can ask questions we'll answer the questions we'll have hey I love that don't you love that I I think that's awesome we'll actually have people on the computer where has that ever been done uh I don't know that I mean we did it but I don't know we're gonna we're yeah so on a big scale though yeah I think this has never been done that's what my point was Rick I got it it's going to be very cool and the like the whole this whole comes around this gateway to airguns which if you guys haven't gone to gateway airguns.org you really need to you need to sign up and you need to be participating in that for because that is really the overall brella company the mothership yeah and then we've got other people that are joining with us but air gun uh excuse me gateway air guns is just a great for where you can get a lot of information there's more and more new air gunners coming out that don't know things uh you know the marauder is such a great gun and if you want to tune it unless you have help you're just spinning you're you're just going around in circles you can go to the gateway air guns and get help that's what they're there for so whether it's hot signs stuff if you want to tune a springer or you want to you know whatever you're going to find out of the million in some bazillion posts and comments you're going to find something that creates where you want there's more information than you can shake a stick at you got to remember too it's uh I think it's the oldest running webs you know website dedicated to air rifles could be nowadays yeah because the yellow was and then it went away so I think it's now the oldest so there's a lot of people on there that's been on there a long time that have gathered a lot of information to share and I don't care what you got I don't care if you've got a bb gun or a big bore and everything in between there's a category and a spot for you to find information on what you're looking for so I got a couple uh I got a couple questions no not a rapier uh it's just I coke unfortunately jimmy asks has anybody got any feedback on the Diana k98 Mauser PCP I've got actually I don't know if they've published it yet but I did a definitive guide of that for airgun depot so I have shot that gun it is a pretty neat gun it's not big on shot count or power it's really designed to give you a realistic mouser action kind of feel little PCP so it's supposed to look like it feel like it you know sort of be like it it's not like your high-powered PCP air gun it's a replica it's a PCP versus co2 so I like the gun quite a bit I thought it was a lot I can't wait to shoot that I think I still have one in the

I might have had to send it back I don't know I had a couple of them so I don't know we'll have to go through if you get here early we'll start going through the pilot we'll be there early you know we'll have a Rick's private stock uh array of things to play with so last week uh we talked about show and tell remember yeah did you have anything you wanted to show and tell well you know Rick as you know what I do for a living I don't get to really show too much of the stuff that I'm working on unfortunately because it's stuff that's usually going to come out in a couple months or next year or the year after but what do I have here that uh people can see that I can show off I don't know why don't you uh show me what you got no I don't know I'll dig up something I got I got a few things here I think I could first things I'll get you some trouble

I wanted to let everybody know if you've been waiting for an Umarex Hammer we have five of them in stock over that's ten five of them in stock over at airgun pro shop so we've had some uh people shuffling around and some people moved away so I'm behind in my social media because I know people have been wanting to actually buy one I'm not talking buy one wait for it I mean physically have five units in this in the warehouse that could put a sticker on and go out the door so if you've been interested wanting to get a Umarex Hammer and don't want to pre-order one but want to buy one and have it shipped we got five of them so just one nice for that right I got one yeah right away and not mine you can't have mine but I have five new ones in the box the next thing and this is my show and tell today you guys have been asking or we've had a lot of people been asking about the new uh when we're gonna get our next shipment of Evanix stuff in specifically everybody wants the 50 cal uh REX P pistol which is a great little picture

what I've always wanted to see in the rex line

excuse me I had a red beard choking on that redneck no nope it's diet coke it's cause I'm the one with the beer there you go you've got the red beer okay so I've got what I've always wanted to see with the rex line is it's always been focused on big bore 35 45 and 50. I wanted to see what a rex rifle would do in a 25 because I was thinking if you had a coyote raccoon pest problem you didn't want 150 foot pounds you wanted 80 but you wanted that projectile going really fast so you had less flight time less chance for them to jp the shot but you still had it was really effective yeah right now coyotes man they're twitchy I had something done you say you had it done do you mean you had Evanix do it or you had somebody do it because we know you didn't do it no

so let me switch cameras and we have a few of these in stock and I can order more what's happened with Evanix by the way if you guys were wondering I was running Evanix USA and that whatever what it was that is no longer but Evanix is still importing through dealers I happen to still be a dealer with the airgun pro shop so this is actually great because I'm not limited to just what they want to send me okay I get to actually choose what I want to sell which is kind of I think going to work better in the long run more expensive for me but nonetheless I get to pick what I want to sell this is one of those examples and I have one more that I can't wait to show you this it's freaking awesome all right let me just compose myself flip the camera go to your I'm gonna get in there

hey look they upgraded their packaging no sock I haven't even opened this up yet all right so that is like way better we were having to strap these down with zip ties before we don't have to do that anymore that's cool okay let me pull this up oh it's all modular no okay

we're going to shoot that baby at the expo aren't we oh yes and I'm going to be shooting it before that because I actually have people interested in what this will do okay so this is your rex rifle but instead of excuse me instead of having it chambered for a big bore you know 35 or something larger it's chambered for 25. and we have the same length the barrel we have the same tube it has a new valve excuse me so if we can get 80 or 90 foot pounds out of this which is what I'm hoping then I've got like a really light weight yeah that's super fun hey is that the something power adjustable not really it's let me see if they've still got it so

it does have a two-stage Hammer so if you were shooting pellets you could put it in the first stage that's what I was wondering and then slugs put on the second stage

okay so what's new they've got a newly designed trigger the geometry is different the sears different it's smoother lighter all that kind of stuff but I'm hopeful this would like an ATN optic a night vision optic or thermal would be just such a nice little package let me ask you it's got that big shroud on it so yeah does it reduce uh the noise at all it does no it does and you can and I'm pretty sure Donny FL has already made an adapter because this just comes off johnny's how awesome is Donny FL by the way yeah so he's probably got something that just replaces that okay hey so does the shroud slip off right now yeah slide

it off there it unscrews boy this guy's put a lot of machine work into this yeah wow this was more "showy and telly" than I expected yeah that's cool though all right now okay so there's you're okay so it does it does have a it does have an air stripper on it yeah it's got an air stripper so it does it does have an effective yeah right oh yeah okay that's what I wanted to know yep that's pretty cool I dig that yep that's a short barrel uh it's 24 inches no hold on 18 inches yes

it's pretty cool though we I hope you guys are like Travis you're watching some of these comments because I can't do both let's see here that's the end of the stripper you got to go to the bottom you know what just give me some buffer all right goodness well it's going to be it's going to be an inch longer than it is it's 18 inch barrel you happy now okay that's exactly what I said it was yeah okay well I wonder what kind of power we're going to get out of this that's what you know because of that valving system it doesn't take a really long break to make power so it's just straight out right I I still I still think with a short barrel like that it'll still do 80 plus footballs if it if we can get if I can get 80 or 90 out of this with the with the h with the hunter supply slugs that is I think it will happened hey what's the what's the field pressure 250 bar 250 bar tell everyone what that is in psi

uh you're looking at like 36 50 36 25 something like that so it's pretty good but that is what I've been super excited about that is going to be awesome the other thing which is cool is we were able to actually lower our prices a little bit which what's the retail uh 800 bucks hey that's not bad is there a manometer in the butt end of that

heck yes right on yeah I love those little guns man

it's a purpose-built gun I love that yeah no I think that this you could you know what Rick very light send that to me put it on my channel no no no no you can come out and play with one can I start a tab yes yes you can start at that so all right let me go back and see if we've got some questions because we've got a bunch of people watching so let me all right let's get into some questions you know a lot of people come here for their answers and by golly they need their answers uh okay here's a good one uh and I can answer this one for you uh how can I adjust the velocity of my Gamo coyote 25 buy another gun

I don't have a good answer for you they're BSA product they're kind of made to be what they are you can try a different Hammer spring but it's really balanced they have that fast strike valve and the Hammer spring is balanced to give you consistency and shot count if you try and take it out of spec you just go backwards I just tell you you're not you're not going to get the results you want you'd be better off looking at a different product yeah it's not a real good gun to tinker with really no psas are not guns you want to yeah exactly and their whole lines are like that you know the chiefs and everything but you know there are a lot lots of options out there okay what's your opinion of the hots on proxima I've tried a brand new one and I know one thing it's heavy it's too heavy for my taste I shot a proxima way back when it came out it's built on like their dominator line it wasn't a great performer for them so if I'm going to buy an under lever I'm going to save up and I'm going to buy an air arms tx200 that is a great gun the proxima is multi-shot uh but it's kneecapped with performance it does it never look I haven't shot one of the new ones so maybe they've fixed it I just got my first under lever bud did you yeah back there probably like it's probably like a browning clone or something I'm going to tell you what it looks like you can't talk about it you can't talk about that whatever show it to you whatever I could show it to you mr i

yeah that particular line at least when I shot it years ago I was based on the dominator line and it had it never really generated the power and that's just because of the mechanics of it so

they do make some better models though now well their break barrels are great like the snipers and the ones yeah they make with five thirty five it's time to upgrade is what Rick's telling you well the proxima is an upgrade theoretically I would just go different gun for underwear personally uh let's see oh [Music] hey air gunners which one would be a better choice uh the rex origin or the hot sound flashback what do you think Travis the what was the second one Rick the origin or the hot sun flash pup well one's a bullpup and one's a rifle so I mean that's two completely different things so normally when I compare something they're at least the same type of something so if you're asking me which one would I rather have

no he's asking which one would be better for what better choice overall that's a big that's a big ass question that's a tough question we need more information overall yeah that's like do you have a way to feel what you I need to know what you're doing with the thing yeah and you have a way to fill the flashback yeah and the other thing is with the flash pup it's a

bullpup have you ever shot a bullpup a lot of people buy them and hate them a lot of people buy them and love them I'm one of those guys up at the bottom and hated them at first couldn't stand bullpups and it took me probably two years and getting some training from a guy who knows how to shoot them really well before I started liking them now it's almost all I shoot is bullpups but it's not one of those things that that just grow on you know I think it's if you have to commit to it all right it's like an acquired taste yeah if something tastes bad up front why do I want to acquire a taste for it right and that's how I feel about bullpups yeah you know and still today even now that I shoot mostly bullpups I still prefer a carbine you know I still prefer a carbine over a standard rifle or over a bullpup so which one's better I don't know I mean they they're two totally different things because one's a bullpup and one's a rifle so it's hard to compare them if you're talking energy and stuff like that well we can compare it that way or shot count we can compare it that way but I got a couple things I want to jump in here first of all Kyle is asking when will SWA start selling their new 20 gauge at 27 inch barrel I have 30 or 40 of them in production right now we are going to be doing a full launch at the expo so right after the expo we're going to have actually inventory that we can sell immediately afterwards so if you've been waiting on the longer SWAs look we're doing a 27 inch barrel the reason is excuse me is that if you put the 30 inch barrel it's too long to fit in a standard case it's a pain in the butt to ship and even put in anything so we're going with a 27 inch barrel because that will fit in the case we can do custom builds if you want a 30 inch but it'll be more money and we can do them you're not going to gain a lot in that three inches anyway no you really won't another person another person said a comment Tim said this uh speaking of the hots on break barrels uh that they're all the same just different stocks and actions let me let me say this having worked with hot sauna years ago they have three or four different power platforms they have their youth gun which was their alpha or something which was very easy then you have the 90 85 95 the 125 and the 135 each of those is very different the internals are different the tube diameter is different the stroke is different all of those are triggers are different everything well the triggers they use the quattro trigger on nearly all of those models have a quattro variant except the alpha but the big difference is that the power plant the diameter the piston seal all of those are very different so there are actually a lot of differences between the guns uh based on the model 80 90 85 and 80 85 95 of one set 125 is another set and 135 each one is unique so just as a heads up let's see no bullpups in Canada I should move there uh I feel right at home yeah that's right that's right nope they do not allow bullpups in Canada really yeah that's the weirdest damn thing I no I better not tell that story I might not have been in jail somewhere probably in Canada uh gentleman's asking about the hot sun mod 95 one of my favorite guns wood stock metal if they're still building in the same way that gun was a great gun I would love to personally have again a Mod 95 with the qe that's what I would like to have again in my collection I don't have hardly any hats on

guns anymore option in hot sun opinion hot sun vectus you don't want to ask me in my opinion we're getting a lot of hot sound questions we are and the vectus that's that underlever one yeah you don't want my opinion on that let's move on uh Rob's talking about the muddy girl uh that's the alpha money that's a really neat little youth gun those are really nice so and inexpensive yeah they were very inexpensive okay I think we've kind of gone through a bunch of the questions here so I showed a show and tell do you got something you want to show or should I grab the next thing well now Rick I'm trying to think here what I can show without getting in trouble hey you know what I got all right what you got

this guy here

oh that's pretty isn't that pretty what is that look at this look at this wood all right didn't you show that recently what is that is that an FX huh what is that can you read it Askalone

I don't know what is that that's an Asylcon mx6 okay regulation it's a little bit like like an origin not an origin what's the one I'm thinking about no no no no no no not origin I take it what does it look like the action is very much like a Evanix like a crawl or uh like like the like the new Crosman crawls yeah yeah yeah yeah this is this is made in turkey yeah okay look at the stippling well I can't because it's out of focus and you're moving too fast oh let me go super slow there you go give a camera shot man yeah that's pretty doesn't it sure shoots nice too it's bottle fed regulated shrouded half inch with neff when they take their time they can make a really nice gun these are nice these are I mean the quality is really high in it's uh it's oh no hello don't break stuff yeah let's see what else do I got hiding back here well there's that under lever I can't really can't show me that I got stuff in the other room too that's pretty cool well let's see what I got over here all right and then then I got one more to show you all right hold on I can't show it to you now I'm gonna get in trouble it's got lettering on the side hey I got a question I'm gonna jp in on real quick yeah let's do it so I've got a guy asking Angie's ass to say that name again yeah it's acid acyl acid it's a toxic it's an [__] something or other so who you guys asking what a what an air arms s510 177 can generate with 20 grain slugs 20 grain slugs yeah that's heavy I don't know

that baby would go be going awfully slow out of that gun yeah I don't know that that's the right animal no way that is not a good combo yeah I think I would pass maybe stick with a

11 like 10.6 or something yeah I had most a little birdie whisper in my ear about 177 slugs coming out I can't say who mm-hmm but that to me is exciting I also talked to a company today with regards to the expo asking them to send a particular 177 that I would like to shoot anyway we'll see what happens yeah you know what I told you I my uh raptor mini yeah you have a one seven yeah it shoots it shoots Nielsen slugs like a laser beam man it is blazing fun to shoot that would be fun gentleman's asking about AEA airguns and you know I don't know anything about them my only interaction with them is they asked me if I take a look at their guns for him sure uh oh I gave him my rate card oh you want us to pay well yeah this is sort of my job oh and can you buy the guns when we're when you're done with them so that was my experience with a doesn't sound like a great experience no and I think I'd be I'd love to take a look at the guns I'd love to evaluate the guns and reviews yeah you know what but I do actually have to eat so yeah I think they get more questions than they get answers and boy they'd be that is one of those companies that would do my dogs are tearing things up would do good at the uh expo you know where you could get our hands on them shoot them show people what they do measure their performance all that other stuff oh that reminds me oh I got another I got a good question but go ahead that reminds me we need to get a hold of the lab radar guys yes that was the email I did not send today I will do that okay tomorrow worst case scenario just buy one yeah put a sticker over their name there you go yeah it's called the Travis radar system a gentleman's asking of under levers hk97 or the Walther lgu compared to the air arms all right so you're like do I want to drive a Ferrari a Lamborghini yeah that's a or a you know a gap in it pretty good huh some other high-end car which one would you have if you could have one of those three oh that hk man no I I didn't like the hd you didn't I did not like the hk now I will tell you I didn't like the hk but I was shooting a synthetic stock hk and I heard that the balancing that's in the synthetic stock gave it problems and I would agree to that because I couldn't hit the broadside of barn with it I loved my lgu I sold it to a good friend of mine oh that's right you're telling me that was lgu is gorgeous I sold my air arms one time and regretted it the day it left and I've got air arms back and I will not sell it again unless maybe I need to eat but the air arms the air arms is probably going to be my favorite the lgu however is it's going to be right I don't think they make him anymore which is like a you know should have a moment of silence for that I mean it was such it was way over the engineered and expensive it was gorgeous and I have an lg v which is an 800 break barrel of I mean that's kind of gets to the ridiculous side of things I mean it is a one of a kind sort of shooting experience from a break bros perspective but it's that's a lot of money but you feel it when you [__] it shoot it you see you actually feel why it's that much money I saw a wish comb for sale this week oh really yeah and you didn't buy it was 3 200 oh that's actually not a bad price that's not a great price if you're a collector and you have to have one if you're and it was mint condition it was like serial 12 or something I was like did it have all the did it have the different barrels and

everything too I didn't look I as soon as I saw it I saw the price I'm like I gotta get out of here quick yeah I'm gonna get out I don't want to look I'll be tempted oh by the way I heard a little roar that Eric and Angie will be out for the show hey Hillary bring some sandwiches well I think would have to have some shooting competitions with Angie yeah Angie oh crap oh I don't have it I really wanted to do a video with Angie because she has a really nice tricked out Crosman was walker and I had my woods walker where I put the AR stock on it but I wanted to put a j star p rod valve in it and then challenge her to shoot at 100 yards but anyway I don't have any p rod valves don't know what I'll ever get any so that's done all right tell us what's coming up on the compressor series uh no portables next or okay so uh did we do the hill compressor last week well we went over it on our pre-show meeting but we'll be doing it again I asse well I have a series on modern airgunner where I went through all these personal compressors yeah I saw that so I'm going to do a series on portables I'm starting with the Davey Compressors which are a Chinese compressor uh that you can buy on amazon and we actually carry them in the pro shop and we do this we do a lot of service and warranty repair work on them but anyway uh I'm hoping to do a whole series on that I probably won't get to it till after the show but I've got everything from the little young hang sort of clone all the way up to a gas powered scuba compressor by that company so has a lot of options and they're all pretty good so thank you after this is over remind me to tell you about the compressor and that's all I'm going to say right now all right all right ask tell me remind me to tell you about books more stuff that we can't say on the air but I might be able to bring it to the air connect

okay you ready for the next show and tell yes okay I'm even more excited about this than I was with the rex really yeah you're serious I did serious I don't know I thought that rex was pretty bad at the bone and 25 towel racks

as you can see it's another black box yeah more at the next more minex we just got the shipment he ever asked Mr. Lee where he came up with that name I have not I did ask him the first time I met him how to say mmx

it's not Evanix it's no evidence that's epinephs yeah okay here you guys you ready okay uh asking if Joe is going to be yes Joe from JSB should be here he'd already booked this flight Joe hotel room are you ready now can I guess what it is yeah did you already tell me I probably did so no you can't well then I'm not gonna guess all right so this is where I'm gonna go back to my other camera this is where I think this change in dealer versus

distributor is gonna be better because I frankly didn't have the cash flow to put out three hundred thousand dollars to fund a full what I wanted to sell so give me a uh credit

anyway uh but as a dealer I can actually order smaller voles of things I want and this was one of the things I was begging Mr. Lee please bring back bring it back please bring this line back so oh I know what it is and I have it here so I don't know exactly I have not opened the box I I didn't even pick this box I'm hoping it's labeled right if not oops all right let's see here all right so okay more foam more great packaging

all right what does that tell you well we know it's magazine fed and it's a big and it's a big world look at the big old hole in there all right hold on oh here it is

all right

see I remember those and I thought you know back in the day when that he made that gun this thing is was badass then it's badass now yeah and I'm absolutely tickled that we have it again you get this they've redesigned the butt plate to be stronger and redesigned the little button to be more of a pain above the push

this is the Evanix Sniper back in production new valve new striker new higher pressure this is in 50 cal I got it 30 45 and 50 and that's the beast I am so excited to have this back and available again new trigger too

so that is what we got that is that it's a mean machine man it was mean when it back then and it's yeah I don't know if that comes off or not oh it does oh you can I think you can probably take this off and put a moderator on it I just wanted something I didn't care if it was quiet I just wanted it to be bad to the bones again and that is just awesome so this is what I this is one of the things I've really been excited to see come back and if they do well surprised huh guys I'm just you know he I'm surprised he didn't market that more you know I'm just surprised at that well I killed my very first hog with a variant of this it was the 45 it was a 45 sniper x2 with the carbon fiber bottle but this is just this is a very cool gun and I'm excited to see it come back it's just railed out the crew you got rails here rails here rails here

it's multi-shot this is the 50. I don't know what it does for power yet I haven't tested this as it says got a brand new valve and now we're running 250 bar instead of 200 bar so to me this is the direction that if I was Evanix the semi-automatics are fun and I get that but this was just such a tried and true bread and butter foolproof design yeah this is where I'd spend my time right here yeah that that gun right there lasts forever and it's such a simple design it's so easy to take apart yeah so easy to work on it's so it is not complicated whatsoever yeah so that is my show and tell for the night I'm excited we will have we'll have these up on arrogant pro shop here in the next few days hopefully by the end of the week you'll be able to order these they've still got to go through qc here so we've got to put air in them test them all that kind of stuff before we just slap them up there for sale but anyway that's pretty cool man digging it we'll be shooting that boy at airgun expo also yeah I've got that I've also got a bullpup which you'll probably like they've got the maximal back but I got it in 25 22 25 30 and 45 I skipped to 50. I can't wait to shoot that rex 25. that's that you know when you were here you shot that Gamo 35 long yeah see I was thinking that's a sweet shooting gun that is 25 should be right there with it so yeah that that's like uh that is a good caliber for honey so medi game down yeah 25 is pretty good all right well we're at gosh 7 15 so we've been going a while we've been yacking yeah well you know we got some stuff to share got some questions to answer uh let me see I got some questions here let me go back yeah let's get uh let's see here some people out Angie's been chatting though chatting them up you know how do you yeah I'm not gonna do that I was gonna say a joke but at Angie's expense but I'll leave it I'll leave it till she's waiting for her wait for it till she's in person yeah uh Angie I think you're gonna love the uh 50 here's something I can share with everybody because we went ahead and closed the deal last weekend one of the things we're going to do all right now Joe and Angie listen to this listen ATN is a sponsor for the airgun expo so what we're going to be doing is we're going to take I got two 30 cal snipers we're going to put a excite 4k pro on one and a thermal on the other and at night when we're not doing the expo we're going to go hunt coyotes

but I think that's going to be a hoot oh yeah so and I'm not going to do the shooting I'm not I'll film I'll let I'll let baby Joe and Larry or some of the other may I think john from hawk if I can twist his arm and get him out here I'm gonna let other people go out because we'll have five nights or four nights well we'll have multiple nights with have everybody can get a chance to go out and see if they get a coyote so I think that would be a lot of fun what are those little pigs that run around they're called those people javelina yeah is there a season on those nope but you got to have they are a game animal in Texas so you got to have a gun that meets Texas uh air gun requirements and what is it what's the foot pound 250 isn't it 212 220 something like that it's uh so much it's like 150 doing 150 grain projectile doing 800

feet per second something like that yeah so it's 200 and something we got that covered though oh my gosh yes yeah that's not a problem we can do that but if we saw one of those little buggers running around we could we could score somehow we could now that would be something I would want to try and eat you wouldn't I would I know I want to no no no javelina I heard we're good eating you just got to clean them right yeah so Angie will be here because I'm squeamish but Angie

Angie, Angie, she's our man!

I'll let Angie clean it there you go easy yeah put would you put the bait on the hook for me ng now I can hook the thing all right so is the other and asks if that's a big muzzle break on the end of the sniper yes it's all for looks though yeah it looks cool and that's what hey buddy if you drop the gun on the end of the muzzle won't you won't hurt anything you won't hurt it maybe the rock you'll hurt it yeah all right so let's see if we have any more questions say let's give people some let's tell them some of the people are coming out so we know Angie's coming out, Joe is coming out, Larry from Airguns of Arizona is coming out yup we're missing some people here well I think we got to get them I have some people that are looking to try

uh and she's making fun of you she is she is that distracted she should I have some people that are it's really got to clear their calendar so I don't want to say yeah may have somebody come live hawk I believe we'll have somebody come live you know I gosh it'd be awesome if I could get Claire from air arms to come out but I don't think she could fly and that would be that would be fun I haven't cleared out here how about our older Texas native I haven't reached out yet so that's it that's a I don't know yet so you know and if there are folks watching that want to swing by you know provided we maintain safety protocols and you know you're not coughing and wheezing and hacking up a lung you know we could probably make arrangements for you to come out and hang out with folks for a little bit the idea behind the show however is that we do we are doing it virtually because we want to keep it safe and yet give everybody a chance to see all the cool new stuff that's up there so yeah we're going to give them the shot show experience but times 10. yeah yeah we're taking it up a couple notches yeah Joe's up here too they're going back and forth what is that Joe doing anyway you know he's just he's just look when Joe gets bad mouthing I know what no he's not he's doing fine okay when Joe gets here when Joe gets here I'm gonna put him on this 30-count sniper with the thermal scope and let him go have fun he just better

bring some pretty cop ballots yeah I think we'll shoot the Hades for that for that uh for that hunt the third I'm hoping the Hades shoot really well Joe's gonna fly out so he better start shipping some stuff now yeah right yeah hear that Joe yeah so by the way I'm getting low on 25 Hades just so you know like everybody else right yeah let's see yeah he's letting everybody know what's happening with the uh pellet stuff so yeah that guy I mean I talked to him the other day and they are doing their damndest to get product out but boy I tell you when you're in you got these kind of conditions you know what I mean and around the world it's hard to do a lot of things yeah it's just shipping is a nightmare for one that that's probably the biggest problem going on right now is just shipping man well demand has gone through the roof the man anticipated that then you're just you're just stuck uh they're asking if we've looked at the new 2021 Huben k1 well yep like it you like the han don't you freak yeah I like the Huben yeah it's the only gun the Huben k1 that I own it's the only gun I own that I've never taken apart really yeah is that because you were afraid to I'm not afraid of me nothing to my wife yeah I'm gonna start sending her a picture of goats no little baby goats

in these two knucklehead black labs she's looking at a wiener dog and freaking baby goats and he says hey when you get that when you move out to Texas you can have yourself a little farm yeah no let's not do that let's not get put ideas in my wife's head about farms and goats and giraffes and whatever just bring her by she'll hate it no I'm not doing that all right well let's go ahead and wrap it up what do you think what do you think it's been about an hour has it yeah I know right yeah it went by fast again it always seems to go by fast well I was going to ask yeah so I've got Joe got Angie there's a few people on my into I'm trying to get out scheduling is that's the issue is the scheduling stuff yeah scheduling because everyone's so busy I mean uh the pandemic and everything else in what the country has driven gun cells and pellet cell rifle cells to the roof so everybody is just flat busy and trying to catch up so hopefully we can get a few more of these people out there to show up we'll be able to do when we do our round tables which is what I'm excited about doing is the kind of the daily wraps and the round table stuff yeah we'll be able to do have a live panel but then also pull people on zoom so yeah I got a few people that we're definitely going to do that with that are you know that uh people don't hear from in the industry much and I think that's important that these people chime in you know some of the big swingers so well I think that's it uh somebody asked is the Hammer gonna be in stock I got five of them you can go buy one right now airgunproshop.com go get it yeah there you go you know what I when I got that gun I was surprised at how light it was yeah it knows how small it is it's not very big it's almost like a carbine it's not a big long tank of a gun it's pretty small it's short it's super light and compact it's pretty remarkable

there's a lot of things I like about that gun and there's some things I don't care too much about but I think the likes outweigh the things I don't like for me it's that's definitely the case look it's got a blow by gotta be you gotta be careful with the air coming out beside the magazine yes the weight the cocking force the trigger oh yeah feel all of that far outweigh power yeah the power is crazy yeah I in fact I just sold I had two pretty I had I had two power tuned Texans that are now gone I sold them I had a pile driver I sent back to pyramid air I got you know the only big bore guns I have besides the m x which I sell and the in the SWA is the Hammer uh I don't really to me the Hammer is very versatile very compact very what I want in an air gun uh if in a big bore I don't I mean why the Texans look they shoot great but they're forever long man if you put them side by side the the Umarex looks like a toy it is it doesn't shoot like one no no no but I'm saying it's so much smaller and so uh it's lighter yeah it's lighter but no I mean it's so much shorter it's at least a foot shorter huh it is short it is pushing 600 foot pounds not even trying hard Pete's talking about reviews on the ham repeat I've got next Monday if the weather holds I'll have my full long form review of the Hammer coming out next Monday so if you for you guys have been waiting to see a full review on the Hammer I'll have that and Pete I don't know what you're looking for for satra it's not called the satra anymore it's been rebranded or been taken over by air ventur! it's now the Seneca line so the Seneca eagle claw 25 is essentially the satra and the upgrades they did to that far outweigh the tiny little drop in power it's a phenomenal gun so if you want a satra get the eagle claw they still have those uh with the under you know the John Wayne under lever yeah no I've got that's double tube it's not dual tube anymore they just did a big a big tube on it and it's still variable power pushes nearly 70 foot pounds in 25 so the satra is now yeah I mean I've got that gun in 22 and 20 an old double tube yeah I do I have that but the new version of that is the I like your site dude look at that look at the work on the I know they're really nice guns but the eagle claw you haven't shot the eagle claw

now look at that they're asking about broken day state yeah arrogance of Arizona is a co-sponsor of the event so all of the broke day state uh American Air Arms lcs or I whatever that semi-automatic thing drives sk19 whatever that'll be out there I got one I know I like harassing you about it so yes all of those super high-end stuff will be there I'll tell you what I am looking so so forward to shooting that uh day state will be here too AOA is the important I'm talking today not the red wolf uh oh what's the what's the one looks like the impact yeah that's if you go to our website if you go to if you go to uh the airgun expo uh and go to the page for arrogance of Arizona I can tell you what it is because it's like the first gun on their page what is it I forgot your name come on man I'm gonna look it up oh I went to the

wrong way I'll find it first oh my goodness okay the delta wolf delta wolf man I have not yet got to shoot one and I think I think you're going to get a chance dude dude I'm telling you it is like nero uno on my list of guns to shoot yeah that one might not make it back one you hear that robert Larry bring two Larry for me and Travis can go without because he has already too many cool stuff and no something like that he doesn't like bullpups he already told you that well it's been 90 minutes

it's a bullpup

but it needs to be my bullpen you know I would be maybe willing to be persuaded

still to acquire the taste of a bullpup if I could work with that one for an extended period of time that's what I'm saying well all I'm saying all I'm saying is that electronic power adjuster the electronic trigger yes the chronograph built into the silence yes all on digital display at your fingertips yes is some awesome stuff yes and I I agree and I'm very much looking forward and I have to have one so make a deal with them so I can start a line of credit

all right so I'm gonna go ahead and uh head out because if we got people going on over here so well let's hear it look we're not going to answer their questions no they're not really questions they're oh good just going yeah going back you guys look I understand there's a stylistic difference between the satra 2500 and the eagle claw the eagle claw is what's available you get the same function what I tell Travis

I'll sell them what I like to tell Travis about things when he is so concerned about how a gun looks is that when I'm looking down the scope shooting it I'm not looking at the gun so it doesn't really matter totally the opposite it's got to look the part yeah well anyways

all right so guys that's going to be it thank you for the great discussion tonight the bantering back and forth if you guys have questions reach out to us and we're going to keep our show here in fact our next show will be next Tuesday

oh I've got something going on we'll have to see what happens we might have to do it earlier or later that night I'll let everybody know uh ahead of time but any case we'll keep doing them here on uh arrogant web the airgun expo will be public will be broadcast or streamed live here uh on Airgunweb the whole week like for like hours and hours and hours of airgun stuff live which will be way cool so that's you know what more could you want just think you're a guy sending home Rick yeah Travis is sitting there with his brand new delta wolf

and the guy goes hey give me give me three clicks you know yeah let's turn her up three clicks and see what she does I'll be I'll be there to do it yeah no I'll take I'll take the heat you'll go through the uh discomfort and the discomfort is sitting in that dry heat shooting you know three thousand thirty five hours right he where are you living again that's where you live no yeah me yes but you're going to like Houston area that ain't dry heat no no no where you are that's where the air going expo is yeah there you go yeah but yeah we'll be sitting that dry heat and I'll be shooting that four thousand dollar bill

ouch I don't need a second job or a fifth job all right guys that's it now we're done I promise Travis great hanging out with you as always guys everybody on the chat great hanging out with you guys today too join us arrogant expo 10th through the 14th live here on arrogant web YouTube stay tuned for the Hammer video coming up next week and if you're interested in buying a Hammer or checking out some of this cool new evidence stuff check it out over on airgun pro shop guys that's it for me I'm out bye everyone
